Hyperparameter Impact Analysis

Parameter	Value	Risk	Rationale
-----------	-------	------	-----------

min_samples_split	2	MEDIUM	Very small splits may fragment minority groups.
min_samples_leaf	1	MEDIUM	Tiny leaves can produce unstable decisions for small groups.
class_weight	None	LOW	No class weighting can under-serve minority groups if data is imbalanced.

Likely Contributing Factors

- 1. Low fairness score observed for 'age_group' (score=0.713).
- 2. Highest bias in education -> high_school (bias_score=0.562).
- 3. Suspected hyperparameters: min_samples_split=2 (MEDIUM) - Very small splits may fragment minority groups.; min_samples_leaf=1 (MEDIUM) - Tiny leaves can produce unstable decisions for small groups.; class_weight=None (LOW) - No class weighting can under-serve minority groups if data is imbalanced.

Recommendations

- 1: HIGH PRIORITY: Apply post-processing bias correction
- 2: Implement equalized odds post-processing
- 3: Implement comprehensive bias monitoring in production
- 4: Document all mitigation strategies implemented
- 5: Establish regular bias monitoring procedures
- 6: Provide model explanations for affected groups
- 7: Consider human oversight for high-stakes decisions
